The invention relates to novel vaccines that induce a protective immune response against botulinum neurotoxin (BoNT) serotypes A, B, C, D, E, F and G (BoNTA-BONTG). The vaccine of the invention is novel recombinant of G (BONTA-BONTG). The vaccine of the invention is novel recombinant.

In an accomprising a vector, and at least one nucleic acid fragment comprising a Verter and the livenition. The vector is a venezuelan equine encephalitis virus (VEE) replicon vector. Use of this vector results in the production of large amounts of a protein and vector results in the production of large amounts of a protein canced by a sequence cloned into the replicon. The constructs are used to produce vaccines against botulism. The proteins can also be used as diagnostic tools for the diagnosis of botulism. The transformed host chibit toxin effects. The vaccine currently used against botulism is can be used to analyse the effectiveness of drugs and agents which inhibit toxin effects. The vaccine currently used against botulism is dangerous and expensive to produce, and contains formalin, which is very painful for the recipient. Also, the vaccine formulation. The novel vaccine of overcomes these problems, as it is easily purified, and available in large quantities. It is also expressed in the lymph nodes for a better immune response. Sequences AAZ87212-Z87217 represent synthetic DNA sequences encoding BONT Hc fragments used in the present invention. These were optimised for codon usage for expression in yeast.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /*tag= a //*tag= a //*product= "Synthetic botulinum neurotoxin serotype B //product= (BoNTB) heavy chain C-terminal fragment (Hc)"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel Botulinum neurotoxin vaccine comprising a fragment from botulinum toxin serotypes A\cdot G, is used for inducing an immune response against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Parker M, Dertzbaugh MT,

Botulism neurotoxins are translated as a single 150 kDa polypeptide chain and then posttranslationally nicked, forming a dichain which consisting of a 100 kDa heavy chain and a 50 kDa light chain which remain linked by a disulfide bond. Nucleic acids encoding the carboxy-terminal (HC) or amino-terminal (HN) portion of the heavy carboxy-terminal (HC) or amino-terminal (HN) portion of the heavy carboxy-terminal (HC) can expressed in transformed cells to produce peptide antigens useful for eliciting an immune response to give protective immunity against botulinum neurotoxin, which causes botulism. The nucleic acids are expressible in a recombinant organisms such as Escherichia coll or Pichia pastoris. The use of recombinant nucleic acids are advantageous since it eliminates the need to culture large quantities of hazardous toxin-producting the need to culture large quantities of hazardous toxin-producting the allower. The nucleic acids are advantageous since it eliminates the need to culture large quantities of hazardous toxin-producting a also high and cost of production is lower. The nucleic acids can οĮ New nucleic acids encoding the carboxy- or amino-terminal portions the heavy chain of botulinum neurotoxin of serotype A-G, useful as vaccine against botulism derived from Clostridium botulinum serotypes A-G Claim 2; Fig 4a; 73pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This is the DNA sequence of the Clostridium botulinum serotype B (Danish strain) toxin fragment C gene contained in plasmid pETHisb. The encoded fragment C polypeptide (see AAW68394) has a His-tagged C The encoded fragment in Escherichia coli host (i.e. non-fusion) soluble C fragment in Escherichia coli host cells. The invention relates to recombinant proteins derived from C. botulinum toxins. Methods are provided which allow for the isolation of soluble recombinant proteins free of significant endotoxin contamination. Preferred hosts for production of recombinant toxins are E. coli, insect cells and yeast cells. The recombinant toxins are useful in the treatment of vaccines and antitoxins that are useful in the treatment of humans and animals at risk of intoxication with clostridial toxin.
                                                                                                                                                                                                                                                                                                                                                                                                             seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqn-emb1/NA1998.DAT:AAV30581
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Host cell containing recombinant expression vector encoding Clostridium botulinum type B or E toxin - useful to treat humans and other animals at risk of intoxication with clostridial toxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antitoxin; vaccine; neurotoxin; toxin B; intoxication; immunogen;

This is the coding region of the Clostridium botulinum serotype B (Danish strain) toxin gene that codes for a 1291-amino acid polypeptide (see AAM68929). The C fragment (see AAM68934) of the B toxin has been expressed as histidine-tagged protein in Escherichia coli host cells. The invention relates to C. botulinum recombinant toxin polypeptides. Methods are provided which allow for the isolation of soluble recombinant proteins free of significant endotoxin contamination. Preferred hosts for production of the recombinant proteins are E. coli, insect cells and yeast cells. The recombinant proteins are used as immunogens for the production of vaccines and antitoxins that are useful in the treatment of humans and animals at risk of intoxication with clostridial toxin.
                                                                                                                                                Host cell containing recombinant expression vector encoding Clostridium botulinum type B or E toxin - useful to treat humans and other animals at risk of intoxication with clostridial toxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2603

consisting of a 100 kba heavy chain and a 50 kba light chain which consisting of a 100 kba heavy chain and a 50 kba light chain which consisting of a 100 kba heavy chain and a 50 kba light chain which cemain linked by a disulfide bond. Nucleic acids encoding the carboxy-terminal (HC) or amino-terminal (HN) portion of the heavy chain of botulinum neurotoxin (BoNT) can be used in recombinant compared to botulinum neurotoxin (BoNT) can be used in recombinant compared captured captured earliest of produce peptide antigens useful for eliciting an immune response to give protective immunity against botulinum neurotoxin, which causes to protective immunity against botulinum neurotoxin, which causes of botulism. The nucleic acids are expressible in a recombinant or generation and secherichia coll or Pichia pastoris. The use of recombinant nucleic acids are advantageous since it eliminates the need to culture large quantities of hazardous toxin-producing bacterium, production yield from the genetically engineered product is also high and cost of production is lower. The nucleic acids can be derived from Clostridium botulinum serotypes A-G.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ō

This is the DNA sequence of the Clostridium botulinum serotype B toxin fragment C gene contained in plasmid pHisBotb. The encoded fragment C polypeptide (see AAW68393) has a histidine-tagged fragment C polypeptide (see AAW68393) has a histidine-tagged (.e. non-fusion) soluble C fragment in Escherichia coli host cells. The invention relates to recombinant proteins derived from C. botulinum toxins. Methods are provided which allow for the isolation of soluble recombinant proteins free of significant endotoxin contamination. Preferred hosts for production of recombinant proteins are B. coli, insect cells and yeast cells. The recombinant toxins are used as immunogens for the production of vaccines and antitoxins that are useful in the treatment of humans and animals at risk of intoxication with clostridial toxin.
                                                            Clostridium botulinum type B or E toxin - useful to treat humans and other animals at risk of intoxication with clostridial toxin
Host cell containing recombinant expression vector encoding
                                                                                                                                                                                                                                    Example 35; Page 300-302; 428pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             234
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 251
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            284
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  301
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence encodes a recombinant neurotoxin protein from the present invention. The present invention describes recombinant neurotoxin proteins which comprise a first and second domain, where the first domain is adapted to cleave one or more vesicle or plasma membrane associated proteins essential to exocytosis, and where the second domain is adapted; (a) to translocate the protein into a cell; (b) to increase the solubility of the protein compared to the first domain on its own, or (c) both to translocate the protein into a cell and to increase the solubility of the first domain on its own, the protein compared to the solubility of the first domain on its own, the protein compared to the solubility of the first domain on its own, the protein compared to the solubility of the first domain on its own, or (c) both to translocate the protein compared to the solubility of the first domain on its own, or (c) both to translocate the compared to the solubility of the first domain on its own. The protein can be converted into toxin by proteolytic action. The recombinant proteins can be used as therapeutic agents for targeting cells proteins can be used as therapeutic agents for targeting cells immunogens and as non-toxic standards for the assessment and development of in vitro assays for the detection of functional botulinum or tetanus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Recombinant neurotoxin polypeptides - used to develop therapeutic agents, immunogens or as non-toxic standards for the detection of neurotoxins
                                                                                                Recombinant botulinum neurotoxin type B LH728/B encoding DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   of in vitro assays for the detection of functional botulinum neurotoxins either in foodstuffs or in environmental samples

The invention relates to novel vaccines that induce a protective immune response against botulinum neurotoxin (BoNT) serotypes A, B, C, D, E, F and G (BONTA-BONTG). The vaccine of the invention is novel recombinant by construct comprising a vector, and at least one nucleic acid ragment comprising a vector, and at least one nucleic acid ragment comprising a vector, and at least one nucleic acid response acid in the vector is a venezuelan equine encephalitis virus (VEE) replicon vector. Use of this vector results in the production of large amounts of a protein encoded by a sequence cloned into the replicon. The constructs are used to produce vaccines against botulism. The proteins can also be used as class of the diagnostic tools for the diagnosis of botulism. The transformed host collist can be used to analyse the effectiveness of drugs and agents which inhibit toxin effects. The vaccine currently used against botulism is dangerous and expensive to produce, and contains formalin, which is very painful for the recipient. Also, the vaccine is incomplete, in that only concine of overcomes these problems, as it is easily purified, and available in large quantities. It is also expressed in the lymph nodes for a better immune response. Sequences AAR87212-Z87217 represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /product= "Synthetic botulinum neurotoxin serotype G (BoNTC) heavy chain C-terminal fragment (Hc)" /note= "No stop codon given in the specification"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel Botulinum neurotoxin vaccine comprising a fragment from botulinum toxin serctypes A-G, is used for inducing an immune response against botulinum -
                                                                                                                                                                                                                                                                                                                                 Botulinum neurotoxin; heavy chain; BoNT; serotype G;

Botulism neurotoxins are translated as a single 150 kDa polypeptide chain and then posttranslationally nicked, forming a dichain consisting of a 100 kDa heavy chain and a 50 kDa light chain which remain linked by a disulfide bond. Nucleic acids encoding the carboxy-terminal (HC) or amino-terminal (HN) portion of the heavy carboxy-terminal (HC) or amino-terminal (HN) portion of the heavy carboxy-terminal (HC) can amino-terminal (HN) portion of the heavy carboxy-terminal (HC) or amino-terminal (HN) portion of the heavy capression vectors and expressed in transformed cells to produce peptide antigens useful for elicting an immune response to give protective immunity against botulinum neurotoxin, which causes. Corputisms such as Escherichia coli or Pichia pastoris. The use of recombinant nucleic acids are advantageous since it eliminates the need to culture large quantities of hazardous toxin-producing bacterium. Production yield from the genetically engineered product is also high and cost of production is lower. The nucleic acids can be derived from Clostridium botulinum serotypes A-G.
                                                                                                                                                                                                                                                                                                                                                                                            New nucleic acids encoding the carboxy- or amino-terminal portions of the heavy chain of botulinum neurotoxin of serotype A-G, useful as vaccine against botulism
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           189
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              190 AACAACTCCGAGAAACTCCAACATCACCGCCCACCACCAGCTCGTCGT 239

This is the DNA sequence of the Clostridium botulinum serotype G (113/30 strain) neurotoxin fragment C gene contained in plasmid pETHISD. The encoded BotG fragment C polypeptide (see AAW68400) has elisticated in the case of the case and the case are provided which allow for the isolation of soluble recombinant proteins free of significant endotoxin contamination. Preferred broats for production of recombinant toxins are E. coli, insect calls and yeast calls. The recombinant toxins are E. coli, insect calls and yeast calls. The recombinant toxins are used as immunogens for the production of vaccines and antitoxins that are seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqn-embl/NA1998.DAT:AAV30596 Host cell containing recombinant expression vector encoding Clostridium botulinum type B or E toxin - useful to treat humans and other animals at risk of intoxication with clostridial toxin Antitoxin; vaccine; neurotoxin; toxin G; intoxication; immunogen; botulism; BotG; ds. The invention relates to novel vaccines that induce a protective immune response against botulinum neurotoxin (BoNT) serotypes A, B, C, D, E, F and G (BONTA-BONTG). The vaccine of the invention is novel recombinant.

DNA construct comprising a vector, and at least one nucleic acid fragment comprising a vector. and at least one nucleic acid fragment comprising a C-terminal heavy chain fragment (Hc) from BoNT serotypes A-G. In preferred embodiments of the invention, the vector is a vector results in the production of large amounts of a protein encoded by a sequence cloned into the replicon. The constructs are used to produce vaccines against botulism. The proteins can also be used as diagnostic vaccines against botulism. The proteins can also be used as diagnostic tools for the diagnosis of botulism. The transformed host cells can be used to analyse the effectiveness of drugs and agents which inhibit toxin effects. The vaccine currently used against botulism is dangerous of contents of the T serotypes are represented in the formulation. The novel vaccine contents the vaccine is incomplete, in that only 5 of the T serotypes are represented in the formulation. The novel vaccine large quantities. It is also expressed in the lymph nodes for a better immune response. The present sequence represents bNA encoding native the the present sequence represents by an exemplification of
                                                                                                                                                                                                                                                                                                                                                                                             Novel Botulinum neurotoxin vaccine comprising a fragment from botulinum toxin serotypes A-{\sf G}, is used for inducing an immune response against

consisting of a 100 kDa heavy chain and a 50 kDa light chain which remain linked by a disulfide bond. Nucleic acids encoding the carboxy-terminal (HK) portion of the heavy chain of botulinum neurotoxin (BONT) can be used in recombinant expression vectors and expressed in transformed cells to produce peptide antigens useful for eliciting an immune response to give protective immunity against botulinum neurotoxin, which causes contuism. The nucleic acids are expressible in a recombinant organisms such as Escherichia coll or Pichia pastoris. The use of recombinant nucleic acids are advantageous since it eliminates the need to culture large quantities of hazardous toxin-producing bacterium. Production yield from the genetically engineered product is also high and cost of production is lower. The nucleic acids can be derived from Clostridium botulinum serotypes A-G.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               102 IleasnCysMetLysAsnAsnSerGlyTrpLysIleSerIleArgGlyAs 118

Chain and then posttranslated as a single 150 kDa polypeptide chain and then posttranslationally nicked, forming a dichain chain and then posttranslationally nicked, forming a dichain consisting of a 100 kDa heavy chain and a 50 kDa light chain which remain linked by a disulfide bond. Nucleic acids encoding the carboxy-terminal (HC) or anino-terminal (HN) portion of the heavy carboxy-terminal (HC) or anino-terminal (HN) portion of the heavy chain of botulinum neurotoxin (BoNT) can be used in recombinant expression vectors and expressed in transformed cells to produce peptide antigens useful for eliciting an immune response to give protective immunity against botulinum neurotoxin, which causes coulism. The nucleic acids are expressible in a recombinant or producing are advantageous since it eliminates of recombinant nucleic acids are advantageous since it eliminates the need to culture large quantities of hazardous toxin-producing bacterium. Production yield from the genetically engineered product is also high and cost of production is lower. The nucleic acids can be derived from Clostridium botulinum serotypes A-G.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acids encoding the carboxy· or amino-terminal portions of the heavy chain of botulinum neurotoxin of serotype A-G, useful as vaccine against botulism

```
A synthetic gene (AAT29245) codes for the heavy.chain C fragment (AAR95008) of Clostridium botulinum type A neurotoxin (see also AAR95010). Codon usage allowing efficient gene expression in Escherichia coli was utilised. The gene in vector palterBot was used to make expression constructs in which fragments of C. difficile toxin A repeat domains were expressed as genetic fusions with the C. botulin C fragment and expressed in E. coli.
to treat C. difficile intoxication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  278 AATACTTCAAC.....TCCATCTCTCTGAACAATGAATACACCATC 318

Clostridium botulinum serotype A.

botulism; ds

```
This is the DNA sequence of the Clostridium botulinum serctype A toxin C-fragment gene contained in plasmid palterBot. Recombinant C-fragment proteins have been produced in Escherichia coli as fusion proteins with either maltose binding protein or clostridium difficile type A toxin (see AAW68387). The invention relates to recombinant proteins derived from C. botulinum toxins. Methods are provided which allow for the isolation of soluble recombinant proteins free of significant endotoxin contamination. Preferred hosts for production of recombinant proteins are E. coli, insect cells and yeast cells. The recombinant toxin proteins are used as immunogens for the production of vaccines and antitoxins that are useful in the treatment of humans and animals at risk of
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Host cell containing recombinant expression vector encoding Clostridium botulinum type B or E toxin - useful to treat humans and other animals at risk of intoxication with clostridial toxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GTICTAAAGTTAACTICGATCCGATCGACAAGAATCAGATCCAGCTGTTC 177

Clostridium botulinum
Bacteria; Firmicutes; Bacillus/Clostridium group; Clostridiaceae
Clostridium.
1 (bases 1 to 3876)
Kirma,N., Ferreira,J.L. and Baumstark,B.R.
Characterization of six type A strains of Clostridium botulinum
                                                                                                                                                                                                                                                                                                                             3090 AATAACGCTAAAATTTATATTAATGGTAAGCTAGAATCAAATACAGATATTAAAGATATA 3149
